### **Abstract**

The abstract is amended as follows:

This invention provides a composition comprising an effective amount of (1-3)- $\beta$ -glucan derived from barley capable of enhancing efficacy of antibodies. This invention further provides the above compositions and a pharmaceutically acceptable carrier. This invention also provides a method for treating a subject with cancer comprising administering the above-described composition to the subject. ~~This invention provides a composition comprising effective amount of glucan capable of enhancing efficacy of vaccines. This invention also provides a method of treating a subject comprising administering the above pharmaceutical composition to the subject. This invention provides a composition comprising effective amount of glucan capable of enhancing efficacy of natural antibodies. This invention provides a composition comprising effective amount of glucan capable of enhancing host immunity. This invention also provides a composition comprising effective amount of glucan capable of enhancing the action of an agent in preventing tissue rejection.~~

### **Detailed Action**

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on June 6, 2008 has been entered.

This office action is a response to applicant's request for continued examination submitted June 6, 2008 wherein a supplemental information disclosure statement is submitted. This application is a continuation in part of international application PCT/US02/10276, filed January 15, 2002, which claims benefit of provisional application 60/261911, filed January 16, 2001.

Claims 193-207, 212, 219-227, and 232 are pending in this application.

Claims 193-207, 212, 219-227, and 232 as amended are examined on the merits herein.

The references submitted with Applicant's information disclosure statements, submitted June 6, 2008, have been fully considered and are not found to be the basis for any ground of rejection against the previously allowed claims.

Specifically, the references submitted include copies of office actions issued in several unrelated patent applications. The rejections made in the office action issued for application 11/334763 are not applied to the instant application because the rejected

subject matter is different from the subject matter of the previously allowed claims. The one claim in this copending application concerns compositions of a beta-glucan. No specific structure or source is required by said claim, much less a composition of the beta-glucan with an antibody. The rejections made against this claim do not concern barley beta-glucans, or glucans in combination with an antibody. It is also noted that the Yan et al. reference cited in this office action has been previously discussed in office actions of record in the instant application and found not to disclose or render obvious the instant claims.

The other US office action regarding copending application 10/535484 cites the prior art Yan et al., Herlyn et al., Suzuki et al., and Jamas et al. Suzuki et al. and Jamas et al. do not anticipate or render obvious the instant claims because they do not disclose or suggest coadministering beta-glucan with an antibody, but merely teach coadministering the glucan with a chemotherapeutic agent, which is a different type of drug having a different mechanism of action. Based on the synergism between beta glucans and chemotherapeutic agents, one of ordinary skill in the art would not have had any reason to believe that they would also exert synergistic effects with antitumor antibodies. Yan et al. and Herlyn et al. do not anticipate the claimed invention because they use a different beta-glucan derived from yeast, which has a different structure from barley beta-glucan and would not be expected to exert the same biological effects *in vivo* as the claimed glucans. Therefore the instant claims would not be obvious over either one of these reference either.

As for the additional references submitted with this office action, these references fail to teach or suggest the claimed subject matter. Specifically, they fail to teach or suggest combining beta-glucans with anti-cancer antibodies. Furthermore these references disclose yeast or fungal beta-glucans that have a pure (1,3) oligoglucose backbone with no (1,4) linkages, unlike the barley glucans required by the instant claims. The reference US PGPUB 2006/160766 discloses the claimed invention, but it is not prior art as it was published after the filing date of the instant application and cannot be cited under 35 USC 102(e) because it has the same inventive entity as the instant application. Furthermore it raises no issues of double patenting because it has not been allowed.

#### **Allowable Subject matter**

Claims 193-207, 212, 219-227, and 232 are seen to be allowable. The claimed combination of a therapeutic antibody and barley beta-glucan is not seen to be taught or fairly suggested by the prior art, as discussed above and in the previous notice of allowance submitted January 24, 2008. Applicant's information disclosure statements and the accompanying references are not seen to raise any new issues of prior art as discussed above.

Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled, "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eric S. Olson whose telephone number is 571-272-9051. The examiner can normally be reached on Monday-Friday, 8:30-5:00.
